Sourav Ramakrishna

Melbourne, Australia| Sourav.rk.21@gmail.com | +61 493670389 | Sourav | Portfolio

Professional Summary

Highly motivated and detail-oriented Security Engineer with hands-on experience in Security Operations Centre (SOC) environments, specializing in SIEM monitoring, behavioural analytics, and threat detection. Proven ability to investigate complex security events, write custom detection logic (KQL/EQL), and resolve critical Data Loss Prevention (DLP) policy failures. Driven by a strong sense of integrity, curiosity, and discretion, I am eager to transition into a specialized Insider Trust function to proactively monitor behavioural risks and protect sensitive enterprise data. Technically grounded in Linux, Python, and security automation, bringing a highly professional and consultative approach to confidential investigations and incident triage

Technical Skills

- **Security Operations & SIEM:** SIEM monitoring (ELK), alert investigation, incident triage, threat analysis, phishing analysis.
- **Penetration Testing:** Kali Linux, Burp Suite, OWASP ZAP, Metasploit, Nmap.
- **Threat Detection & Response:** IDS/IPS (Snort, Suricata), log analysis, and network anomaly detection.
- **Web Security & Programming:** Python, C, Bash; Built secure web apps as academic projects.
- **Cryptography & Data Protection:** Establishing encryption (AES, RSA), public key infrastructure, secure certificate management, and protocols for communications integrity and confidentiality.
- **Network Security:** TCP/IP, OSI Model, DNS, VLANs, VPNs, DMZ, NAT
- **Cloud Security:** AWS, Oracle Cloud **Authentication/Protocols:** SSL/TLS, IPSec, HTTPS, RADIUS, TACACS+ .
- **Report Writing:** Technical risk reports, client documentation.
- **Soft Skills:** Clear email, Slack, and video communication; stakeholder management.

Professional Experience

Security Engineer – ThIRU (Threat Incident and Response Unit) (Aug 2025 – present)

- **DLP Investigations & Data Protection:** Engineered Active Directory Group Policy Objects (AD GPOs) to enforce granular USB mass storage blocking across enterprise endpoints, effectively mitigating insider data exfiltration risks while maintaining peripheral hardware operability.

- **Behavioral Monitoring & Alert Tuning:** Conducted continuous behavioral monitoring of user sessions by analyzing Windows Security Logs in Elastic SIEM; tuned winlogbeat.yml pipelines to track critical interactive authentication patterns (Event IDs 4624, 4625, 4647) and eliminated noisy system accounts to prioritize high-fidelity insider threat indicators.
- **Detection Engineering & KQL/EQL**: Authored custom Elastic Query Language (EQL) and KQL detection logic to engineer an automated Threat Detection and Response (TDR) pipeline targeting unauthorized "Living off the Land" (LotL) PowerShell executions, reducing Mean Time to Detect (MTTD) to sub-minute (<60s) intervals.
- **Incident Triage & Contextualization:** Architected a technical integration between the Elastic cluster and GLPI ITAM to automatically contextualize 100% of live SIEM alerts with precise user identities and device ownership, reducing analyst context-switching by ~40% and accelerating the investigation of suspicious insider activity.
- **Deception Technology & Lateral Movement Tracking:** Orchestrated internal network monitoring by deploying a high-interaction T-Pot deception network featuring 30+ virtualized decoys; analyzed 1,000+ weekly probing attempts to identify unauthorized lateral movement, privilege escalation behaviors, and internal reconnaissance patterns.

Cybersecurity Project – Monash University (Feb 2023 – Jun 2025)

- Led penetration testing of an in-house web application; identified 20 vulnerabilities, including 6 critical (broken authentication, SQLi, XSS), reducing risk exposure by 40%.
- Collaborated with IT and engineering teams to remediate 15 issues, accelerated fix timeline by 2 weeks.
- Produced detailed technical reports and executive presentations, streamlining stakeholder decision-making.
- Deployed secure network design principles (segmentation, DMZs, VPNs) to fortify campus infrastructure.
- Configured and managed IDS/IPS platforms (Snort, Suricata) for live traffic analysis and threat response.
- Implemented cryptographic protocols (SSL/TLS, IPSec) in practical lab environments.

Ethical Hacking Intern – Internshala (Nov 2022 – Jan 2023)

- Detected and remediated critical vulnerabilities in live business websites, improving security posture by 30%.
- Conducted manual and automated testing with Burp Suite/OWASP ZAP, discovering flaws such as SQLi/XSS.
- Developed Python scripts to automate security scanning and reporting.
- Communicated remediation plans to dev teams via email/Slack, strengthening client relationships.

Cybersecurity Intern – Verzeo & MVARO (Aug 2022 – Nov 2022)

- Implemented vulnerability assessments for web and network systems; identified and tracked 15 weaknesses, reducing reportable threats by 25%.
- Utilized IDS/IPS and SIEM tools for threat detection and event management.
- Presented professional-grade technical documentation and client-facing reports.
- Updated firewall rules and collaborated on network security protocol deployment.

Education

Masterof Cybersecurity | Monash University, Melbourne | Feb 2023 – Jun 2025

Bachelor of Computer Applications | Jain University

Certifications & Training

- Microsoft Certified: Security Operations Analyst (In Progress)
- Cisco CCNA (In Progress)
- LinkedIn Learning – Azure for Architects (Networking Strategy)
- Ethical Hacking & Cybersecurity Fundamentals
- Active in cybersecurity community, self-driven technical learning

Additional Information

- PermanentAustralian working rights
- Driver's Licence: Full, unrestricted
- Current Police Check – Clear
- Availability: Hybrid onsite/remote
- Soft Skills: Strong customer communication, adaptability, problem-solving mindset
